

FlexForm: The tool for modifying and translating form content

Create forms easily and flawlessly from within your SAP system. SAP offers various technologies for doing so. It does not matter what technology you use. Modifying or translating

forms has always been expensive as well as an error prone process. This, though has now changed by using FlexForm.

How has changing and translating forms worked so far?

Whether it is SAP Interactive Forms by Adobe, PDF-Based Print Forms, Smart Forms or SAPscript, changing and translating form content is a very cumbersome, tedious and error-prone process for each of the four SAP form technologies. There are two reasons for this. Firstly, in SAP form content changes are made directly to the form by default. This requires ABAP programming skills and painstaking fine work which could easily and quickly lead to confusion and

errors. Secondly, forms in SAP are basically language dependent. If a general form change is made, that change must be implemented separately for each language and the same also applies to translations. When translating a document, it must be manually ensured that textual content, the style of presentation and the data to be read are correctly linked to the target language as well.

Why and how does FlexForm make life easier

FlexForm technology makes these challenges easier. With almost all changes to the form content the actual form remains untouched because FlexForm works with so-called view clusters. This includes all form content. View clusters are spreadsheets that interact with the form as part of the FlexForm solution. The form itself is language independent as it contains only variables. If a new form with one of the four SAP form technologies in the SAP system is created, this is done by a transmission of the data stored in the view

cluster to the form. The data is then entered in the appropriate place in the variable and the form is created and issued as usual. For end users, FlexForm remains completely unnoticed. When changing and translating forms, a lot of time and money can be saved by using the FlexForm technology. Experience has shown that form changes are relatively common. Therefore, using FlexForm proves to be useful, valuable and beneficial to you even after a very short time.
